

**Accessories for rotary tools in dental and industrial quality:
Polishing Bits.**

For gold, stainless steel, porcelain: Polishing Bits

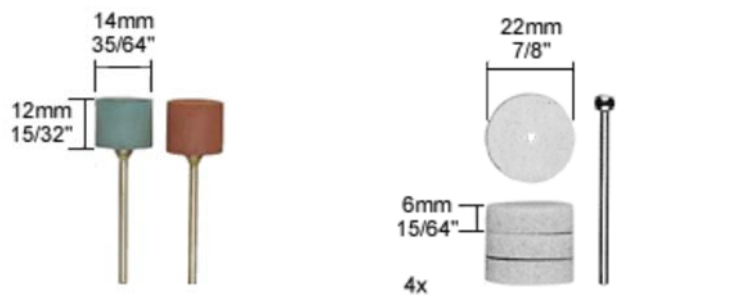

NO 28 293

NO 28 294

NO 28 288

Silicone Polishers

Rubberized abrasives, used for surface smoothing and polishing of precious metals, non-ferrous metals, hardened metals, tensile steels as well as glass, porcelain, wood, rubber and plastic. Remove fine burrs and scratch marks left by grinding and sanding. All shanks \varnothing 2.35mm (3/32").

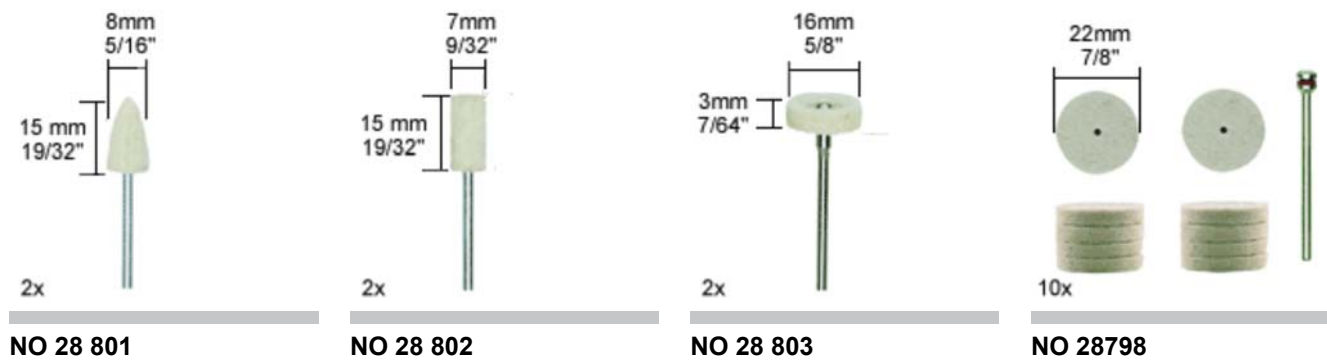

NO 28 295

NO 28 296

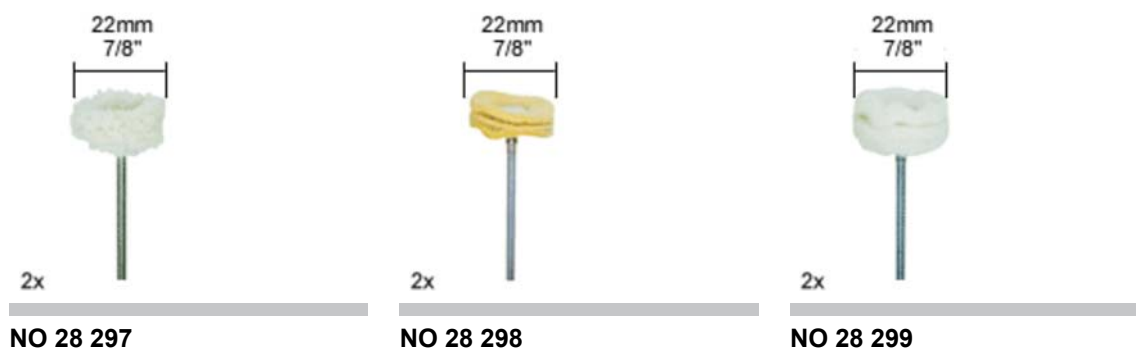

Silicon-Carbide Polishers

Polishers made of highquality silicon-carbide in a conformable bonding of high resistance (no rubber). Used especially on precious metals, in mold and die production, fine mechanics, etc. Ideal for smoothing and polishing cut edges of Plexiglas. The edges will become clean and sleek. All shanks \varnothing 2.35mm (3/32").

Felt Polishing Tips

Assorted shapes for fine finishing jobs on work pieces of metal, non-ferrous metal and plastic as well as for cleaning those tough-to-reach areas. Shank Ø 2.35mm (3/32").

High Gloss Polishing Set

Cotton, suede and felt buffing. Used with polishing compound for high gloss polishing of metal, non-ferrous metal, ceramics, porcelain. Also for polishing of plastics and lacquered woods. All shanks Ø 2.35mm (3/32").

NO 28 292

Polishing Compound

This universal solid-compound is used with cotton, felt, or suede polishing wheels or tips for high gloss polishing.
